DriveLeads Platform Overview

Unified lead management and automation

March 14, 2026

OVERVIEW

HSR Motors is a car dealership that generates leads from multiple advertising platforms including **Facebook**, **Twitter**, **Google**, their **Website**, and offline events like **auto expos** and **walk-ins**. The core problem is that they currently manage all these leads using spreadsheet software, which creates serious operational challenges: no real-time collaboration between team members, leads falling through the cracks due to manual tracking, no way to prioritize high-value prospects, zero analytics visibility for the Business Manager, and no audit trail of customer interactions.

My approach with DriveLeads is to build a unified, real-time lead management platform that serves both user types — the **Sales Team** and the **Business Manager**. The solution centers around four core screens: a **Lead Listing** for daily sales operations, a **Lead Details** view for complete customer context before every call, a visual **Kanban Pipeline** for intuitive stage management, and an **Analytics Dashboard** for performance monitoring. What makes DriveLeads stand out is its automation layer — featuring auto lead assignment, intelligent lead scoring, automated welcome messages, SLA-based follow-up reminders, duplicate detection, and smart status suggestions. These automations ensure that no lead is ever missed and the sales team can focus on selling instead of spreadsheet management.

FEATURES

1. **Lead Listing (Sales Team)**
   The primary working screen for the sales team. Displays all leads in a searchable, sortable, and filterable data table. Columns include Lead Name, Phone, Email, Source (with color-coded badges for Facebook, Google, Website, Twitter, Walk-in, Referral), Interested Vehicle Model, Status (New, Contacted, Qualified, Negotiation, Won, Lost, Not Interested), Lead Score (0-100 with Hot/Warm/Cold indicators), Assigned Sales Rep, and Created Date. Supports bulk actions for assigning multiple leads or changing statuses at once. One-click Call and Email action

buttons on each row for instant outreach. Filters for Status, Source, Assigned Rep, and Date Range help reps quickly find their priority leads.

2. **Lead Details (Sales Team)**
   A comprehensive 360-degree view of an individual lead. Left panel shows Contact Information (phone, email, location, preferred contact time), Vehicle Interest (model, variant, budget range, purchase timeline, fuel preference, color preference, exchange vehicle details), a chronological Activity Timeline logging every interaction (lead creation, auto-scoring, automated messages, calls, notes, status changes), and a Notes section for post-call documentation. Right sidebar displays Lead Score Breakdown with factor analysis (Budget Match, Purchase Timeline, Engagement Level, Location Proximity), Assigned Rep details with performance stats, Upcoming Actions priority list, and Quick Status Update buttons. This screen ensures sales reps have complete context before every customer interaction.
3. **Lead Pipeline — Kanban Board (Sales Team plus Business Manager)**
   A visual drag-and-drop pipeline with five columns representing lead stages: New, Contacted, Qualified, Negotiation, and Won. Each lead card displays the source tag, lead score circle, customer name, interested vehicle, assigned rep, and time since last activity. Smart alert badges appear on cards to highlight critical items: yellow alerts for unassigned leads approaching auto-assign deadline, blue alerts for follow-ups due today, green alerts for hot leads ready to close, and a sold badge showing deal value for won leads. Drag any card between columns to instantly update its status. Pipeline statistics at the top show total count per stage for a quick overview.
4. **Analytics Dashboard (Business Manager)**
   The Business Manager command center providing a quick-view of all lead performance data. Top row has four KPI metric cards: Total Leads (1,247 with 12.5 percent growth), Conversion Rate (23.4 percent with 3.2 percent improvement), Average Response Time (2.4 hours with 18 minute improvement), and Pipeline Value (Rs 4.2 Crore with 8.1 percent growth). Second row shows a Lead Trends line chart tracking New Leads and Conversions over time with Weekly, Monthly, and Yearly toggles, alongside a Lead Sources donut chart breaking down Facebook 35 percent, Google 25 percent, Website 18 percent, Twitter 8 percent, Walk-in 8 percent, and Referral 6 percent. Third row contains a Conversion Funnel (New 1247 to Contacted 1022 to Qualified 686 to Negotiation 436 to Won 292), a Top Sales Reps Leaderboard, and a Real-Time Activity Feed.
5. **Auto Lead Assignment**
   When a new lead arrives, the system automatically assigns it to the next available sales rep using round-robin logic based on current workload and availability. If a lead remains unassigned for more than one hour, the Business Manager receives an alert. This eliminates manual assignment overhead and ensures fair distribution.
6. **Smart Lead Scoring (0-100)**
   Every lead is automatically scored based on four weighted factors: Budget Match (25 points) checks if the customer budget aligns with available inventory, Purchase Timeline (25 points) scores urgency, Engagement Level (25 points) measures form completeness and repeat visits, and Location Proximity (25 points) scores distance from the dealership. Leads are classified as Hot (80-100) requiring immediate attention, Warm (50-79) for 24-hour follow-up, or Cold (0-49) for nurture campaigns.
7. **Automated Welcome Message**
   Instantly sends an SMS or WhatsApp message upon lead capture: "Hi [Name], thank you for your interest in [Car Model] at HSR Motors! Our team will reach out shortly." This builds immediate trust and reduces perceived response time.

8. **Follow-Up Reminders and SLA Alerts**
   Every lead gets an SLA timer (e.g., must be contacted within 2 hours of creation). The assigned rep receives a notification before the deadline. If the SLA is breached, the Business Manager is alerted. After every call, the system prompts to schedule the next follow-up.
9. **Duplicate Lead Detection**
   When a new lead arrives, the system checks phone number and email against existing records. If a duplicate is found, it merges the data into the existing lead and notifies the rep instead of creating a new entry. This prevents the same customer from being contacted by multiple reps.
10. **Smart Status Suggestions**
    If a lead has been in Contacted status for 7 or more days with no activity, the system suggests marking it as Not Interested. If a lead in Negotiation has had 3 or more calls in the past week, the system highlights it as a Hot Lead. This keeps the pipeline clean without manual effort.
11. **Automated Daily Digest Email**
    Every morning at 9 AM, each sales rep receives a summary email with their new leads count, pending follow-ups due that day, SLA risks, and their top priority lead. The Business Manager receives a team-wide performance summary. This ensures everyone starts the day focused on what matters.

WIREFRAME / MOCKUP / PROTOTYPE

(4 screen mockup designs are available as separate Canva designs — screenshots to be pasted here)

Screen 1: Dashboard — Business Manager analytics view with KPIs, charts, funnel, leaderboard, and activity feed
Screen 2: Lead Listing — Sales team data table with filters, search, bulk actions, and lead scores
Screen 3: Lead Pipeline — Kanban board with 5 drag-and-drop columns and smart alert badges
Screen 4: Lead Details — Complete lead profile with contact info, vehicle interest, timeline, score breakdown, and quick actions

USER FLOW

Step 1 — **Lead Capture**: A potential customer clicks on an HSR Motors Facebook ad for the Hyundai Creta and fills out the inquiry form. DriveLeads automatically captures this lead via API integration with Facebook Lead Ads.

Step 2 — **Automatic Processing**: The system checks for duplicate entries (matching phone or email). Finding none, it creates a new lead. Auto-scoring runs and assigns a score of 92 out of 100 (Hot) because the budget matches inventory, purchase timeline is within 1 month, and the customer is located near the dealership.

Step 3 — **Auto Assignment**: The system assigns the lead to Priya Sharma using round-robin logic since she has the lowest active workload. An automated welcome SMS is sent to the customer. The

SLA timer starts with a 2-hour contact deadline. Priya receives a push notification about the new hot lead.

Step 4 — **Sales Rep Action**: Priya opens the Lead Listing screen and sees the new lead at the top sorted by score. She clicks to open Lead Details, reviews the customer vehicle interest and budget. She clicks the Call button, speaks with the customer, and learns they want a test drive this Saturday.

Step 5 — **Status Update**: After the call, Priya adds notes documenting the conversation. She updates the lead status from New to Contacted by dragging the card in the Pipeline view or clicking the quick status button. She schedules a follow-up reminder for Saturday. The activity timeline is updated automatically.

Step 6 — **Manager Review**: Business Manager Ravi opens the Dashboard to review daily performance. He checks the KPI cards and notices conversion rate is up. He views the Lead Sources chart to see Facebook generating the most leads. He checks the Conversion Funnel to identify where leads drop off. He reviews the Top Reps Leaderboard and the Activity Feed for real-time team updates.

Step 7 — **Deal Closure**: Over the following days, the lead progresses through Qualified and Negotiation stages. Each status change is tracked in the timeline. When the customer finalizes the purchase, Priya marks the lead as Won with the deal value. The Dashboard updates in real-time reflecting the new conversion.

Summary

This document outlines DriveLeads, a lead management platform designed to streamline operations for HSR Motors' sales team and business manager. It details the key features, including lead listing, detailed lead views, a Kanban pipeline, and an analytics dashboard. Automation features such as auto lead assignment, smart lead scoring, and follow-up reminders are also highlighted, along with user flows and links to Canva mockup designs.
