Overview

HSR Motors is a car dealership facing challenges with manual lead tracking across Facebook, Twitter, Google, and their website. Their current spreadsheet-based system lacks real-time collaboration, leads often get missed, prioritization is absent, business managers have no analytics, and there's no audit trail of interactions.

DriveLeads offers a solution: a unified, real-time lead management platform. It encompasses four core modules:

- **Lead Listing:** For sales teams to view and act on leads.
- **Lead Details:** Provides complete customer context before calls.
- **Lead Pipeline (Kanban):** Enables drag-and-drop lead stage management.
- **Analytics Dashboard:** For business managers to monitor KPIs and team performance.

The platform is powered by **7 automation features**: auto-assignment, smart lead scoring, automated welcome messages, SLA-based follow-up reminders, duplicate detection, smart status suggestions, and daily digest emails – ensuring no lead is ever missed.

Features

The DriveLeads platform offers the following features:

1. **Lead Listing:** A searchable, filterable, and sortable table of all leads. Sales representatives can filter leads by Status (New, Contacted, Qualified, Negotiation, Won, Lost, Not Interested), Source (Facebook, Google, Website, Twitter, Walk-in, Referral), Assigned Rep, and Date Range. It supports bulk actions like assigning multiple leads or changing their status. One-click call and email buttons are available on each row.

2. **Lead Details:** Provides a complete 360-degree view of a lead, including contact information, vehicle interest (model, budget, timeline, fuel preference, color, exchange vehicle), an activity timeline with a full audit trail, a lead score breakdown with factor analysis, and a notes section. Quick action buttons for Call, Email, SMS, and Schedule Test Drive are also available.
3. **Lead Pipeline (Kanban Board):** A visual drag-and-drop pipeline with five columns: New, Contacted, Qualified, Negotiation, Won. Each card displays the source, lead score, customer name, interested vehicle, assigned rep, and time since the last activity. Smart alert badges on cards warn about auto-assign deadlines, follow-up reminders, and hot leads.
4. **Analytics Dashboard:** A business manager command center with four KPI cards (Total Leads, Conversion Rate, Avg Response Time, Pipeline Value), a Lead Trends line chart, a Lead Sources donut chart, a Conversion Funnel visualization, a Top Sales Reps leaderboard, and a real-time Activity Feed.
5. **Auto Lead Assignment:** Round-robin distribution based on rep workload and availability. Unassigned leads trigger manager alerts after 1 hour.
6. **Smart Lead Scoring (0-100):** Auto-scoring based on Budget Match (25pts), Purchase Timeline (25pts), Engagement Level (25pts), and Location Proximity (25pts). Leads are classified as Hot (80-100), Warm (50-79), or Cold (0-49).
7. **Automated Welcome SMS:** Instant acknowledgment sent to the customer upon lead capture, building trust and setting expectations.
8. **Follow-Up Reminders and SLA Alerts:** Every lead has an SLA timer. Representatives receive notifications before the deadline, and managers are alerted upon SLA breach.
9. **Duplicate Lead Detection:** The system checks phone and email against existing records and merges duplicates automatically.
10. **Smart Status Suggestions:** The system suggests status changes based on activity patterns, keeping the pipeline clean.
11. **Daily Digest Email:** A morning email to each representative with new leads, pending follow-ups, and top priority leads. Managers receive a team-wide summary.

User Flow

The following user flows outline how DriveLeads handles different scenarios:

Journey 1 - New Lead Arrives:

1. A customer clicks a Facebook ad and fills out an inquiry form.
2. DriveLeads captures the lead via API.
3. The system checks for duplicates.
4. Auto-scoring runs and assigns a score of 92 (Hot).
5. Auto-assignment triggers and assigns the lead to Priya Sharma (lowest workload).
6. A welcome SMS is sent automatically.
7. An SLA timer starts with a 2-hour deadline.
8. Priya receives a push notification about the new hot lead.

Journey 2 - Sales Rep Works a Lead:

1. Priya opens the Lead Listing, sorted by score.

2. She clicks on a lead to open Lead Details.
3. She reviews the vehicle interest, budget, and timeline.
4. She clicks the Call button and makes the call.
5. She adds notes after the call.
6. She updates the status from New to Contacted.
7. She schedules a follow-up for a test drive.
8. The system updates the activity timeline automatically.

Journey 3 - Manager Reviews Performance:

1. Ravi opens the Dashboard and checks KPI cards.
2. He reviews the Lead Sources chart to identify the best-performing channels.
3. He checks the Conversion Funnel to find drop-off points.
4. He views the Top Reps Leaderboard.
5. He switches to the Lead Pipeline to find stale leads in Negotiation.
6. He takes action by reassigning or requesting updates.
